**SEMESTER ONE EXAMINATION 2018/2019**

**ADVANCED THERMOFLUIDS & CONTROL SYSTEM**

**MODULE NO: AME6005**

Date: 30<sup>TH</sup> September 2018

Time: 09:00am – 11:00am

---

**INSTRUCTIONS TO CANDIDATES:**

There are 6 questions.

Answer 4 questions.

All questions carry equal marks.  
Attempt Three questions from PART A  
and one questions from PART B

Marks for parts of questions are shown  
in brackets.

**CANDIDATES REQUIRE :**

Thermodynamic properties of fluids  
tables are provided

 Semester 1 Examinations 2018/19  
 Advanced Thermo fluids & Control System  
 Module No. AME 6005

**PART A**

- Q1. a)** Water at 25°C flows steadily through the box shown in Figure Q1a, entering station-A at 2 m/s. Both entering and leaving stations are circular pipes with diameters 9cm and 4cm respectively. Calculate the horizontal and vertical forces required to hold the system against the momentum.

**Figure Q1a.**

(12 marks)

- b) The pressure drop per unit length  $\Delta p/L$  in a porous, rotating duct depends upon average velocity  $U$ , density  $\rho$ , viscosity  $\mu$ , duct height  $h$ , wall injection velocity  $U_i$ , and rotation rate  $\omega$ . Considering  $\rho$ ,  $U$  and  $h$  as repeating variables defines in Buckingham pi theorem, express this relationship in dimensionless form.

(13 marks)

**Total 25 marks**

Please turn the page

Q2. a) Briefly explain following terms related to internal duct (pipe) flow.

- i. Laminar and Turbulent flow
- ii. Velocity boundary layer
- iii. Entrance region
- iv. Fully developed flow

(8 marks)

- b) The system in Figure Q2b consists of 800 m of 4 cm cast-iron pipe, two 45° and six 90° flanged long-radius elbows, one fully open flanged globe valve, one gate valve, one angle valve and a sharp exit into a reservoir. If the elevation at point A is 100 m, what gage pressure is required at point A to deliver 0.006 m<sup>3</sup>/s of water at 25°C into the reservoir?

 Module No. AME 6005

- Q3.** (a) A piston–cylinder device contains 0.8 kg of atmospheric air initially at 100 kPa and 27°C. The atmospheric air is now compressed slowly in a Polytropic manner process during which  $PV^{1.3} = \text{constant}$  until the volume is reduced by one-third. Determine the work done and the heat transfer for this process.

(13 marks)

- (b) Steam flows steadily through an adiabatic turbine. The inlet conditions of the steam are 10 MPa, 450°C, and 100 m/s, and the exit conditions are 10 kPa, 95 percent quality, and 30 m/s. The mass flow rate of the steam is 16 kg/s. Determine

- i. The change in kinetic energy
- ii. The power output
- iii. The turbine inlet and outlet areas

**Figure Q3b**

- Q4. The gas-turbine portion of a combined gas–steam power plant has a pressure ratio of 15. Air enters the compressor at 300 K at a rate of 14 kg/s and is heated to 1500 K in the combustion chamber. The combustion gases leaving the gas turbine are used to heat the steam to 400°C at 10 Mpa in a heat exchanger. The combustion gases leave the heat exchanger at 420 K. The steam leaving the turbine is condensed at 15 kPa. Assuming all the compression and expansion processes to be isentropic, For air, assume constant specific heats at room temperature. Determine,
- Air compressor and gas turbine outlet air temperatures
  - Gas power cycle net power output
  - The mass flow rate of the steam
  - The net power output of steam power cycle
  - the thermal efficiency of the combined cycle.

**PART B**

Q5. (a) Describe the importance of stability in control systems.

(4 marks)

(b) For an automated control system open loop transfer function is given as follows. Considering unity feedback control,

$$G(s) = \left( K_p + \frac{K_I}{s} \right) \frac{1}{s(s+2)}$$

i. Find the characteristic equation of the system

ii. Referring RH criteria find the condition of stability related to  $K_p$  and  $K_I$ .

(12 marks)

I Draw the bode plot for below transfer function

$$G(s)H(s) = \frac{14(s+9)^2}{(s+2)(s+5)(s+7)(s+13)}$$

(9 marks)

**Total 25 marks**

Q6. (a) Develop a state model for below transfer function following diagonal method used in state space analysis.

$$TF = \frac{1}{(s+2)(s+5)(s+7)(s+13)}$$

(15 marks)

(b) i. Explain the physical meaning of PID controller referring sketches graphs.

ii. Write down three advantages of PID controller

(10 marks)

**Total 25 marks**
