[ENG14]

UNIVERSITY OF BOLTON

SCHOOL OF ENGINEERING

MSc CIVIL ENGINEERING

MSc CONSTRUCTION PROJECT MANAGEMENT

SEMESTER ONE EXAMINATION 2021/2022

PROJECT MANAGEMENT

MODULE NO: CPM7002

Date: Monday 10th January 2022 Time: 14:00 – 17:00

INSTRUCTIONS TO CANDIDATES:

This exam paper contains <u>TWO</u> sections: section 'A' and section 'B'

Section A contains <u>TWO</u> questions: you must answer these <u>TWO</u> questions. They are worth a total of 50 marks.

Section B contains <u>THREE</u> questions: you should answer any <u>TWO</u> questions from these three questions. Each of these questions is worth 25 marks.

Marks for parts of questions are shown

in brackets.

This assessment carries 100 marks.

All working must be shown.

<u>CANDIDATES REQUIRE:</u> Formula Sheets (attached following

questions).

School of Engineering
MSc Civil Engineering & Construction Project Management
Semester One Examination 2021//2022
Project Management

Module No: CPM7002

Section A - Compulsory Questions (Answer Both Questions in this section)

Question One

(a) PRINCE2 is generic in managing projects; explain this term by discussing the four elements of Principles, Themes, Processes and Project Environment in PRINCE2 structure.

(5 marks)

(b) PRINCE2 manages projects by monitoring the performance of six different variables. Discuss and justify these variables.

(5 marks)

- (c) Appraise the roles and responsibilities of a project manager, and critically discuss the skills and attributes required to be an effective project manager.

 (5 marks)
- (d) Critically discuss the five key stages through which groups or teams pass (Tuckman's Model) and relate that to the nature of the construction industry.

 (5 marks)

Total 20 marks

Question Two

<u>Table Q2</u> contains 13 construction activities and their duration (in **days**) in a project. The table also shows the immediate predecessor for each activity (s) as well as the (**FS**) lagging time of some activities (**in days**) from a specific predecessor.

Complete the following tasks:

- (a) Draw a network diagram for the above activities using a Precedence Diagram. (8 marks)
- (b) Carry out forward and backward passes to determine earliest & latest start times and earliest & latest finish times for each activity, the network critical path and the project duration.

(8 marks)

Question 2 continues over the page....

PLEASE TURN THE PAGE....

MSc Civil Engineering & Construction Project Management
Semester One Examination 2021//2022
Project Management
Module No: CPM7002

Question 2 continued....

(c) Calculate the Total Float (TF), Free Float (FF) and Total Time Available (TTA) for all non-critical activities.

(8 marks)

(d) The construction manager discovered that duration of activity G should be 10 days instead of 6 days, and that of activity K should be 9 days instead of 4 days. Explain how this would affect the network critical path and the total duration of the project.

(6 marks)

Total 30 marks

Activity	Duration	Preceded By	Lag

Section B - Answer any two questions

Question Three

The activities involved in the construction of a road project are given in <u>Table Q3.1</u> together with their estimated durations, logical sequence and cost. Each of the activities will be done using a separate gang. At the start of day 13 from start of the project, the actual work status report is shown in <u>Table Q3.2</u>.

For this project, complete the following tasks:

(a) Draw the project network using Precedence Diagram and determine the project critical path and duration.

(5 marks)

(b) Produce the project Gantt Chart

(5 marks)

(c) Using the Earned Value Management (EVM) technique, check whether the

Total Cost Activity Predecessor Duration Cost/Day (Day) (£/Day) (£) Α 6 400 2400 В 2 450 900 C 550 4400 Α 8 D A, B 5 350 1750 500 1500 Ε В 3 F 400 2400 D, E 6 5 500 G C, D 2500 2 950 н F, G 475

project is on track cost wise and schedule wise.
(15 marks)

Total 25 marks

Table Q3.1

Activity	Actual % Complete	Actual Cost (£)

PLEASE TURN THE PAGE....

Question Four

(a) Critically evaluate the process of Project Risk Management and how each stage of risk analysis and risk response could be conducted including the techniques/tools used in each stage.

(13 marks)

(b) Critically discuss the six main steps of value engineering, and the main tasks and outcomes of each stage.

(12 marks)

Total 25 marks

Question Five

A construction company has been awarded a contract and in the stage of putting an operational plan for the construction phase. The project manager (PM) has determined that 9 tasks would be needed to construct the project. Using the **PERT** three-estimate approach, the PM has obtained estimates for how long these tasks will take as presented in **Table Q5**. **Table Q5** also shows the precedence relationships for these tasks as envisaged by the PM.

VY						
>	Preceded	Estimated Times (Days)				
Activity	by	<i>a</i> (Optimistic)	<i>m</i> (Most likely)	<i>b</i> (Pessimistic)		
Α		4	5	6		
В	Α	10	12	14		
С	Α	7	9	16		
D	В	14	17	22		
E	B, C	10	15	30

F	С	4	7	13
G	D	12	20	40
Н	D, E	10	12	15
I	F, H	8	9	10

Table Q5

(a) Perform the Critical Path Method (CPM) calculations based on the most likely durations and determine the critical path and project duration.

(5 marks)

Question 5 continues over the page....

PLEASE TURN THE PAGE....

Question Five continued

(b) Now apply the Project Evaluation and Review Technique (PERT) and calculate the mean project duration and its standard deviation, if the network keeps the same critical path as in (a).

(10 marks)

- (c) What is the duration of the project with at least a 90% confidence level? (5 marks)
- (d) Compare and discuss the differences between the CPM and PERT project durations found in (a) and (b).

(5 marks)

Total 25 marks

Useful Formulae

PERT Equations

$$t_e = \frac{a+4m+b}{6} \qquad ; \qquad v_e = \left(\frac{b-a}{6}\right)$$

$$T = \sum_{i=1}^{n} t_e^i$$

$$S = \sqrt{\sum_{i=1}^{n} v_e^i}$$

$$Z = \frac{d-T}{S}$$

$$; \qquad P(d \le T) = 1 - P(T > d)$$

where,

t_e = expected mean duration of activity

 v_e = variance of activity duration

a = optimistic estimate for activity duration
 m = most likely estimate for activity duration

b = pessimistic estimate for activity duration, (a < m < b)

T = project mean duration

S = standard deviation of project duration d = project required deadline duration

n = number of activities along the critical path

 $P(d \le T)$ = probability of project required duration less than or equal project

expected duration

Z = standard normal random variable

EVM Terms and Equations

EVM Term		Definition	Formula	
Planned Value*	PV	The budgeted cost for the work scheduled.		
Earned Value*	EV	The budgeted cost for the work actually completed.		
Actual Cost*	AC	The actual cost of the work actually completed.		
Schedule Variance	sv	The measure of schedule performance on a project.	SV = EV - PV	
Cost Variance	CV	The measure of cost performance on a project.	CV = EV – AC	
Schedule Performance Index	SPI	The measure of progress achieved compared to progress planned.	SPI = EV / PV	
Cost Performance Index	СРІ	The measure of the value of work completed compared to the actual cost or progress.	CPI = EV / AC
